

Thank you so much for watching the video! I hope you enjoy this Beatdown guitar tone.

For the best possible way of using this tone, make sure to get the NAM modeler plugin first:

Download NAM here:

<https://github.com/sdatkinson/NeuralAmpModelerPlugin/releases>

After installing simply load up the “HEAVY BEATDOWN.nam” into the model section. There is an cabinet already included in this capture, so no need to load any extra cabs.

To fine-tune the EQ and match the tone as close as possible, load up “HEAVY EQ IR” into the IR section.

If you want to boost the sound even more, simply load one more NAM plugin before the current one and load the “Maxon ST9.nam” on there.

Cheers and have fun!
